

Geometry: Unit 5, Lesson 2

1. Triangle MXD is shown. What is the included angle of sides $\overline{MX}$ and $\overline{XD}$?

2. Triangle THW is shown. To construct triangle LKR , a copy of triangle THW , using a compass and a straightedge, first you must use a compass to copy $\overline{TW}$ to construct $\overline{LR}$ so that $\overline{TW} \cong \overline{LR}$. What do you have to copy so that $\angle HTW \cong \angle KLR$ in step 2?

3. Triangles RCL , GWF , XDY , and MHB are shown. What is a congruence statement that can be proven by SAS congruence?
