

Geometry: Unit 5, Lesson 3

1. $\triangle WBM$ and $\triangle RXT$ are shown where $\angle WBM \cong \angle RXT$ and $\angle BMW \cong \angle XTR$. What other information is necessary to show that $\triangle WBM \cong \triangle RXT$ using AAS Congruence?

2. Triangles MWR and SXT are shown where $\overline{WR} \cong \overline{XT}$, $\overline{WR} \perp \overline{MW}$, and $\overline{TX} \perp \overline{SX}$. Given that $\angle RMW \cong \angle TSX$, what can prove that the two triangles are congruent?

3. Right triangle SPN and right triangle DWH are shown. What other information is necessary to show that $\triangle SPN \cong \triangle DWH$ using the Hypotenuse-Leg Congruence Theorem?
