

Triangle CWN is shown.

1. Josh marked $\angle CRW$ with a right-angle symbol. Explain to Josh why he cannot mark $\angle CRW$ with a right-angle symbol by just looking at the figure.

2. Mark the diagram using the given information shown.

$\overline{CR}$ is the perpendicular bisector of $\overline{WN}$.

3. Which side(s) of triangles CRW and NRC are congruent because of the given information?
4. Which angle(s) of triangles CRW and NRC are congruent because of the given information?
5. Which side(s) or angle(s) of triangles CRW and NRC are congruent because of the reflexive property?
6. Using the given information, which, if any, of the triangle congruence theorems or postulates could be used to determine that the triangles are congruent.

☐ SSS

☐ SAS

☐ ASA

☐ AAS

☐ HL

☐ none

Use the given information to answer questions 7-10.

Given: $\triangle BHM \cong \triangle CHM$

7. Mark the diagram with the congruent parts and angles knowing $\triangle BHM \cong \triangle CHM$.

8. What other information is needed to show $\triangle BRM$ and $\triangle CRM$ are congruent?

Complete statements.

9. $\overline{RM} \cong \overline{RM}$ because of the _____.

10. $\angle BMH \cong \angle CMH$ and $\overline{BM} \cong \overline{CM}$ by _____.

Therefore, $\triangle BRM \cong \triangle CRM$ by _____.
