

Triangle CWN is shown.

1. Josh marked $\angle CRW$ with a right-angle symbol. Explain to Josh why he cannot mark $\angle CRW$ with a right-angle symbol by just looking at the figure.

Congruence/equality cannot be assumed from a diagram.

2. Mark the diagram using the given information shown.

$\overline{CR}$ is the perpendicular bisector of $\overline{WN}$.

3. Which side(s) of triangles CRW and NRC are congruent because of the given information?

$$\overline{WR} \cong \overline{RN}$$

4. Which angle(s) of triangles CRW and NRC are congruent because of the given information?

$$\angle CRN \cong \angle CRW$$

5. Which side(s) or angle(s) of triangles CRW and NRC are congruent because of the reflexive property?

$$\overline{CR} \cong \overline{CR}$$

6. Using the given information, which, if any, of the triangle congruence theorems or postulates could be used to determine that the triangles are congruent.

☐ SSS

☒ SAS

☐ ASA

☐ AAS

☐ HL

☐ none

Use the given information to answer questions 7-10.

Given: $\triangle BHM \cong \triangle CHM$

7. Mark the diagram with the congruent parts and angles knowing $\triangle BHM \cong \triangle CHM$.

8. What other information is needed to show $\triangle BRM$ and $\triangle CRM$ are congruent?

$$\overline{RM} \cong \overline{RM}$$

Complete statements.

9. $\overline{RM} \cong \overline{RM}$ because of the reflexive property of congruence.

10. $\angle BMH \cong \angle CMH$ and $\overline{BM} \cong \overline{CM}$ by Corresponding Parts of Congruence Triangles are Congruent.

Therefore, $\triangle BRM \cong \triangle CRM$ by SAS.
