

Geometry: Unit 5, Lesson 6

1. Quadrilateral $FYTP$ is shown, where K is the midpoint of segments $\overline{FT}$ and $\overline{PY}$. What conclusion can be made from the given information and the diagram?

2. Quadrilateral $ABNX$ is shown, where $\overline{AB} \parallel \overline{XN}$ and $\overline{AB} \cong \overline{XN}$. What conclusion can be made from the given information and the diagram?

3. Triangle WTY and triangle RTL are shown, where T is the midpoint of line segments WR and LY . To prove the triangles are congruent, since it is given that T is the midpoint of line segments WR and LY , it can be stated that what?
