

Geometry: Unit 5, Lesson 7

1. A diagram of six triangles is shown. What is an example of two triangles that can be shown to be congruent in order to conclude that $RF \cong FD$?

2. A quadrilateral made up of eight triangles is shown. What triangles can be shown to be congruent to conclude that $\overline{WK} \cong \overline{HK}$?

3. Quadrilateral $RDHF$ is shown, where $\overline{DF}$ is the angle bisector of $\angle RFH$. What is a conclusion that can be made using the given information?
