

Geometry: Unit 5, Lesson 8

1. Right triangles RHD and RHY are shown. Given: RHD is a right triangle. RHY is a right triangle. $\overline{DR} \cong \overline{YR}$. Point H is the midpoint of $\overline{DY}$. An incomplete flowchart proof is shown. What is the reason for $\triangle RHD \cong \triangle RHY$?

2. In the diagram, $\overline{RB}$ is parallel to $\overline{EF}$ and $\overline{RG}$ is parallel to $\overline{HF}$. Given that $\overline{RB}$ is parallel to $\overline{EF}$, then what can be concluded?

3. Triangle PWR is shown. Given: $\angle PSW \cong \angle PSR$, point S is the midpoint of $\overline{WR}$. Prove: $\angle WPS \cong \angle RPS$. A partial two column proof is shown in the table. Complete the proof for statement 3.

Statement	Reason
1. $\angle PSW \cong \angle PSR$	1. Given
2. S is the midpoint of $\overline{WR}$	2. Given
3. $\overline{WS} \cong \overline{RS}$	3. [DROP DOWN 1]
