

Geometry: Unit 5, Lesson H1

1. Segment HR divides triangle $HB F$ into triangles HRB and HRF as shown so that $\overline{BR} \cong \overline{FR}$. $\overline{HB} \cong \overline{HF}$. The triangles are congruent because of what?

2. $\triangle RKT$ is shown on the coordinate grid. $\triangle RKT$ is translated left 3 units and down 5 units to create $\triangle R'K'T'$. What are the coordinates of $\triangle R'K'T'$?

3. The point W has coordinates $(-6, 4)$. What transformation maps point W onto point W' with coordinates $(6, 4)$?
