

Geometry: Unit 6, Lesson 1

1. Triangle DFG is the result of a dilation of triangle NKL . $NK = 21$, $KL = 18$, $NL = 25$, $DF = 8.4$, $FG = 7.2$, and $DG = 10$. The scale factor of triangle NKL to triangle DFG is what?

2. Quadrilateral $PFGH$ was created by dilating quadrilateral $MBGK$. If the length of $MB = 4.2$ and the scale factor is 3, what is the length of the corresponding side, PF ?

3. Triangles HKD , CMN , SLG , TRP , and FYV are transformations of $\triangle ZWB$. What is an example of a pair of triangles that represents rigid transformations of $\triangle ZWB$?
