

The coordinates of $\triangle JKL$ and $\triangle J'K'L'$ are shown in the table, where $\triangle JKL$ is the preimage:

$\triangle JKL$		
Vertex	x	y
J	-2	0
K	-3	3
L	-1	2

$\triangle J'K'L'$		
Vertex	x	y
J'	2	0
K'	3	3
L'	1	2

1. Use the coordinate grid to graph $\triangle JKL$ and $\triangle J'K'L'$.

2. What type of transformation was applied to the preimage $\triangle JKL$?
3. Was distance preserved in this transformation?
4. $\triangle J'K'L'$ is further transformed by dilating with a scale factor of $\frac{1}{2}$ centered at the origin to create $\triangle J''K''L''$. Graph $\triangle J''K''L''$ on the coordinate grid above.
5. Was distance preserved in this second transformation from $\triangle J'K'L'$ to $\triangle J''K''L''$?

Complete the following statements about the transformation of preimage FGH :

6. Triangle $F'G'H'$ was created by a This transformation	☐ translation. ☐ reflection. ☐ rotation. ☐ dilation. ☐ does ☐ does not preserve distance.	
7. Triangle $F'G'H'$ was created by a This transformation	☐ translation. ☐ reflection. ☐ rotation. ☐ dilation. ☐ does ☐ does not preserve distance.	
8. Triangle $F'G'H'$ was created by a This transformation	☐ translation. ☐ reflection. ☐ rotation. ☐ dilation. ☐ does ☐ does not preserve distance.	
9. Triangle $F'G'H'$ was created by a This transformation	☐ translation. ☐ reflection. ☐ rotation. ☐ dilation. ☐ does ☐ does not preserve distance.	
10. Triangle $F''G''H''$ was created by a transformation sequence of first a ☐ translation. ☐ reflection. ☐ rotation. ☐ dilation. This transformation sequence	☐ translation ☐ reflection ☐ rotation ☐ dilation ☐ does ☐ does not preserve distance.
