

Geometry: Unit 6, Lesson 9

1. Triangle KND and DHN are shown. Using the image, what reason justifies the statement $\overline{ND} \cong \overline{ND}$?

2. Triangles FST and FCN are shown. $\angle TFS \cong \angle CNF$ and $\frac{FS}{NF} = \frac{FT}{NC}$. What angle is approximately equal to $\angle T$?

3. Triangles LNW and GFK are shown. $\overline{LW} \parallel \overline{KG}$ and $\overline{LN} \parallel \overline{KF}$. $\angle LNW \cong \angle GFK$ because when two parallel lines are intersected by a transversal, then what are congruent?
