

Geometry
Unit 6
Lesson 10 Homework

Name _____
Date _____
Period _____

Fill in the table given that $JKL \sim QRS$.

	Corresponding Angles	Corresponding Sides
1.	$\angle JML \cong \angle$	$\frac{JM}{SR} = \frac{ML}{QR}$
2.	$\angle TQR \cong \angle$	$\frac{SR}{QR} = \frac{QR}{QR}$
3.	$\angle TSR \cong \angle$	$\frac{JK}{TS} = \frac{QR}{QR}$
4.	$\angle JKL \cong \angle$	$\frac{TS}{QR} = \frac{LK}{QR}$

5. If $ML = 6.5$, $TS = 2.5$, and $QR = 5$, determine JK .

$\triangle ACF$ and $\triangle VXZ$ are shown. $AC = 10$, $CF = 12$, $AF = 20$, $VX = 9$, $XZ = 7.5$, $ZV = 15$, $m\angle ACF = 131^\circ$, $m\angle XZV = 27^\circ$, and $m\angle ZVX = 22^\circ$.

6. What similarity theorem or postulate could be used to prove the triangles are similar?

7. Write a similarity statement for $\triangle ACF$ and $\triangle VXZ$.

Complete the table.

	Angle Measures	Side Proportions
8.	$m\angle CAF =$	$\frac{AC}{ZX} =$
9.	$m\angle CFA =$	$\frac{CF}{XV} =$
10.	$m\angle ZXV =$	$\frac{FA}{VZ} =$
