

1. The measurements of the sides of $\triangle WBT$ are $BT = 9.2$, $WB = 7.9$, and $WT = 11.7$. Determine the measures of each of the angles of $\triangle WBT$. Round to the nearest tenth of a degree. Show your work in the space provided, including the set-up of the law you used to find each measure.

Angle	Work	Measurement
$\angle B$		
$\angle T$		

2. Some of the measurements of $\triangle THW$ are $TW = 7$, $m\angle HTW = 53^\circ$, and $m\angle HWT = 111^\circ$. Determine the measurement of each part of $\triangle THW$. Round to the nearest thousandth. Show your work in the space provided, including the set-up of the law you used to find each measure.

Side	Work	Measurement
$\overline{HT}$		
$\overline{HW}$		

3. A community is building a dog park on a triangular piece of land. Given that $m\angle T = 63^\circ$, $LT = 63.25$ yards, and $LC = 79.5$ yards, find the area, in square yards, of the dog park. Round to the nearest thousandth of a square yard. Show the set-up of your work in the space provided.

Area	

4. Henry, located at point H , is taking a free kick during a soccer game. The width of the goal, $\overline{LR}$, is $9\frac{5}{6}$ feet (ft) wide. Henry is $13\frac{1}{2}$ yards from the right goal post, point R . The measure of the $\angle RLH$ is 43° . Determine the measure of the $\angle RHL$. Round to the nearest tenth of a degree. Show the set-up of your work in the space provided.
