

The diagram shows measurements for $\triangle YBW$, $\triangle GRW$, $\triangle HTW$, and $\triangle NFW$.

Complete the table using $\angle W$ as the reference angle.

	Triangle	$\frac{\text{opposite}}{\text{hypotenuse}}$	$\frac{\text{adjacent}}{\text{hypotenuse}}$	$\frac{\text{opposite}}{\text{adjacent}}$
1.	$\triangle YBW$			
2.	$\triangle GRW$			
3.	$\triangle HTW$			
4.	$\triangle NFW$			

For $\triangle YBW$, $\triangle GRW$, $\triangle HTW$, and $\triangle NFW$ find the decimal equivalent for each ratio.

	Ratio	$\triangle YBW$	$\triangle GRW$	$\triangle HTW$	$\triangle NFW$
5.	$\frac{\text{opposite}}{\text{hypotenuse}}$				
6.	$\frac{\text{adjacent}}{\text{hypotenuse}}$				
7.	$\frac{\text{opposite}}{\text{adjacent}}$				

Complete the statements.

8. The decimal equivalents of the

☐ $\frac{\text{opposite}}{\text{adjacent}}$
☐ $\frac{\text{adjacent}}{\text{hypotenuse}}$
☐ $\frac{\text{opposite}}{\text{hypotenuse}}$
☐ three

 ratios for triangles YBW , GRW , HTW , and NFW are equal.

9. Because triangles YBW , GRW , HTW , and NFW are

☐ congruent
☐ similar

 triangles, their side lengths are

☐ congruent.
☐ proportional.

10. Since triangles YBW , GRW , HTW , and NFW share

☐ $\angle W$
☐ side $\overline{FN}$
☐ sides $\overline{FN}$ and $\overline{RN}$

 and are

☐ acute
☐ obtuse
☐ right

 triangles, it is possible to define trigonometric ratios in any right triangle.
