

Geometry: Unit 7, Lesson 5

1. $\triangle CHF$ shown is a right triangle. $\overline{CF} = 5$ and $\overline{HF} = 13$. What is the length of $\overline{CH}$?

2. In $\triangle TPM$, $m\angle TPM = 90^\circ$, $\overline{TP} = 7$, $\overline{MP} = 24$ and $\overline{TM} = 25$. What is the tangent of the angle $\angle PTM$?

3. Right triangle $\triangle RKC$ is shown where $KC = 6$, $RK = 8$, and $RC = 10$. What is the tangent of $\angle C$?
