

Geometry: Unit 7, Lesson 6

1. Right triangle VLR is shown where $m\angle RVL = 30^\circ$, $m\angle VLR = 90^\circ$, and $LR = 2.7$. What is $m\angle VRL$?

2. Right triangle WYZ is shown, where $m\angle WZY = 90^\circ$, $m\angle YWZ = 45^\circ$, and $ZW = 4.5$. What is the length of $\overline{ZY}$?

3. Right triangle LHK is shown where $m\angle LHK = 90^\circ$, $m\angle HKL = 45^\circ$, $HL = HK = 6$. Is the statement $6^2 + 6^2 = KL^2$ true?
