

Geometry: Unit 7, Lesson 7

1. The unit circle is shown where $\triangle QSR$ is a right triangle and $m\angle RQS = 30^\circ$. If $\angle RQS$ is the reference angle, what is the cosine of $\angle Q$?

2. A unit circle with radius of 5 is shown where $\triangle PWR$ is a right triangle. What is the length of $\overline{PR}$, rounded to the nearest hundredth?

3. Right triangles WTS and RTH are shown on the unit circle where W is at $(1,2)$. What are the coordinates of point R ?
