

Geometry: Unit 7, Lesson H2

1. Triangle HFB is shown where $m\angle BHF = 43^\circ$, $m\angle HFB = 90^\circ$, $BH = x$, $BF = 12$, and $FH = 13$. Write an equation that can be used to determine x .

2. Triangle BWN is shown. What side corresponds to angle $\angle WNB$?

3. A man is standing near a 10-meter tall building and looking to the top of the roof at a 70° angle as shown. How many meters away is the man from the building?
