

Geometry: Unit 7, Lesson H3

1. $\triangle SMK$ is shown where $SM = 10$, $SK = 12$, $KM = 18$.
What is the measure of $\angle KMS$, rounded to the nearest tenth?

2. Triangle LWG is shown where $GW = 6$ feet (ft) and the area is 15 ft^2 . What is the height of the triangle, $\overline{KL}$?

3. $\triangle TRN$ is shown with an altitude, $\overline{UT}$, of 3.5. What is the side length needed to find the area of $\triangle TRN$?
