

Task 1: How did you stack up?

With your class, watch the Eggo® Waffles Video. Pause the video, when indicated, and discuss with your group your answer to Task 1. Be prepared to share your answers.

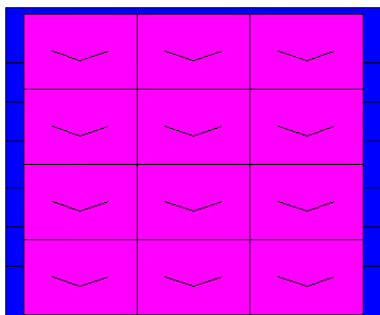

Task: For cost-effectiveness, your group only gets to choose one of the case types 6 or 8 [all measurements are in inches]. Knowing that your stack can't be more than 90" tall, how would your group stack the pallet to get the most (optimize) the truck space?

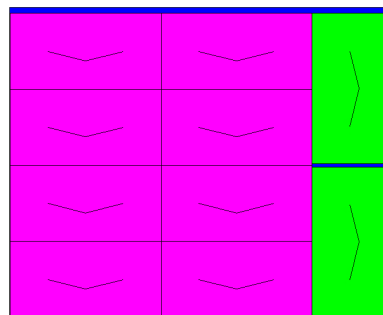

Task 2: Would you rather?

With your class, continue the Eggo® Waffles Video. Pause the video, when indicated, and discuss with your group your answer to Part 2. Be prepared to share your answers.

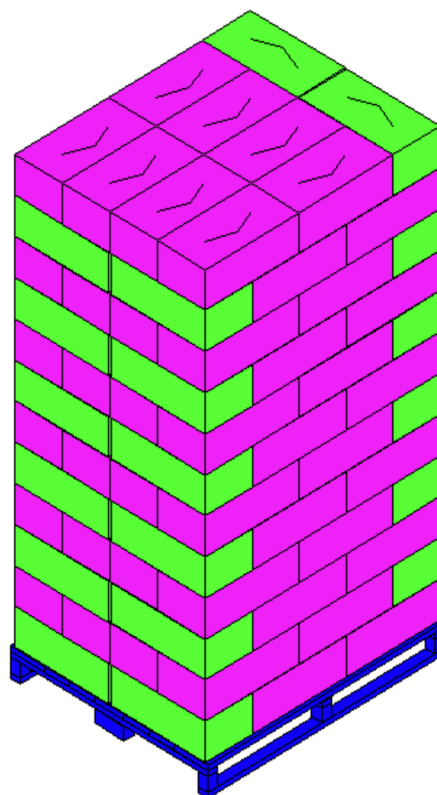

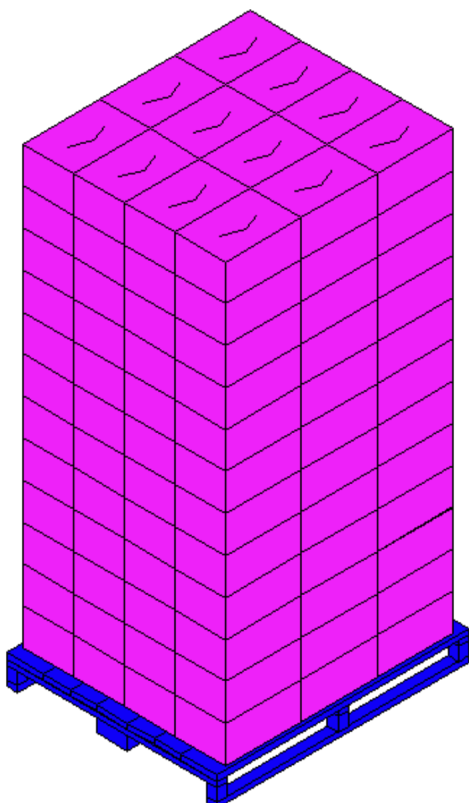

Task: Which stack would your group choose? Be prepared to mathematically defend your answer.

6 Box Case Pallet

8 Box Case Pallet

Task 3: Fill it up and Wrap it up!

With your class, watch the Eggo® Waffles Video to the end. Discuss with your group your final task. Be prepared to share your answers.

Task: Danielle explained that 30 of these pallets can fit inside one truck! How much plastic wrap would you need to wrap all 30 pallets just one time (surface area)? How much space will all thirty of those take up in the truck (volume)?

Workspace:

Wrapped Surface Area (30 pallets):

Volume (30 pallets):
