Unit 10
Lesson 1 Practice

Name_____ **Answer Key** _____
Date_____
Period_____

Use the given context to answer questions 1-10.

Eduardo orders a small circular pizza that has a 10-inch (in.) diameter and is cut into 6 triangular slices.

1. What is the approximate area of a 10-inch pizza? Use 3.14 for π .
 $A = 3.14(5)^2 = 3.14(25) = 78.5 \text{ in}^2$

2. If the slices are cut precisely and equally, what fraction and percentage of the pizza is 3 slices?

Fraction: $\frac{1}{2}$

Percentage: 50%

3. What is the area of 3 slices?

$A = 39.25 \text{ in}^2$

4. What is the central angle of 3 slices?

180°

5. If the slices are cut precisely and equally, what fraction of the pizza is 5 slices?

$\frac{5}{6}$

6. What is the area of 5 slices?

$$A = 65.42 \text{ in}^2$$

7. What is the central angle of 5 slices?

$$300^\circ$$

8. If the slices are cut precisely and equally, what fraction of the pizza is 1 slice?

$$\frac{1}{6}$$

9. What is the area of 1 slice?

$$A = \frac{78.5}{6} = 13.08 \text{ in}^2$$

10. What is the central angle of 1 slice?

$$\frac{360}{6} = 60^\circ$$
