

Geometry: Unit 10, Lesson 3

1. Circle R is shown with points W , C , and L on the circle. Point R lies on $\overline{WL}$. What is the ratio of the measure of the central angle, $m\angle WRL$, to the whole circle?

2. Circle G is shown where $\angle RGD$ is a central angle. If the circumference of circle G is 3π , what is the length of $\overline{GR}$?

3. What is a true statement about central angles?
