

Geometry: Unit 10, Lesson 4

1. Circle D is shown with points R and W on the circle and a radius of 12 inches (*in.*), where $m\angle RDW = 150^\circ$. What is the area of circle D ?

2. Circle M is shown with points C and T on the circle and a radius of 8 inches (*in.*), where $m\angle CMT = 125^\circ$. What is the ratio of the arc length of $\widehat{CT}$ to the circumference of the circle?

3. What is a true statement about an area of a sector?
