

Geometry: Unit 10, Lesson 6

1. Circle S is shown, where points H , P , and N lie on the circle. $\angle HNP$ is an inscribed angle of circle S and $m\angle HSP = 120^\circ$. What is the measure of $\widehat{HP}$?

2. Angles N and C are shown, where $m\angle C = (4x + 3)^\circ$, $m\angle N = (9x - 3)^\circ$, and $m\angle C = \frac{1}{2}(m\angle N)^\circ$. What is the value of x ?

3. Circle W is shown with points C , N , R , S , and K on the circle. What are the central angles?
