

Geometry: Unit 10, Lesson H1

1. Julian is constructing the perpendicular bisector of $\overline{KR}$. His incomplete construction is shown. What is the next step that Julian should make in his construction?

2. Circle T is shown, where points N and R lie on the circle and point H lies outside the circle. What line segment is tangent to circle T ?

3. The construction of the perpendicular bisector of $\overline{KR}$ is shown in the image, and the steps are listed in the table. What is the correct order of the steps in the table?

1	Label the points of intersections of the arcs points M and W .
2	With a compass point on R , set the width of the compass so that it is greater than half the length of $\overline{RK}$. Draw an arc above and below $\overline{RK}$.
3	Draw a line through the points M and W .
4	Without changing the compass width, place the compass on point K . Draw an arc above and below $\overline{RK}$.
