

Unit 11: Worked Examples

1. Describe how to construct Circle H , the circumscribed circle of Triangle ABC .

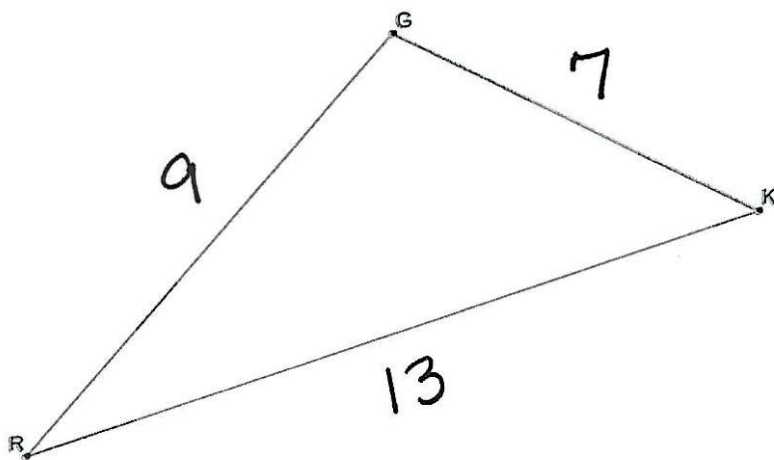

① Construct perpendicular bisectors of 2 of the sides.

② Label the point of intersection H .

③ Place compass on H and adjust length to any vertex.

④ Use the compass to draw the circle.

2. Triangle RGK is shown, where $RG = 9$, $GK = 7$, and $RK = 13$. List the angles in order from smallest to largest.

$\angle R, \angle K, \angle G$
