

Geometry
Unit 11
Lesson 3 Practice

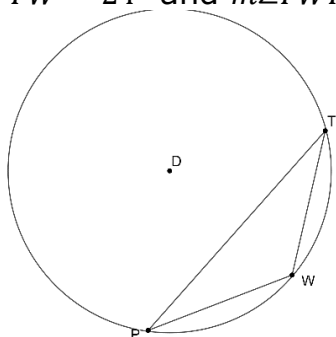

Name _____
Date _____
Period _____

Circle A is shown, where points X, Y , and Z are on Circle A and create $\triangle XYZ$. $m\widehat{XZ} = 140^\circ$, $m\angle ZXY = 30^\circ$, and $m\angle XYZ = (2x - 18)^\circ$.

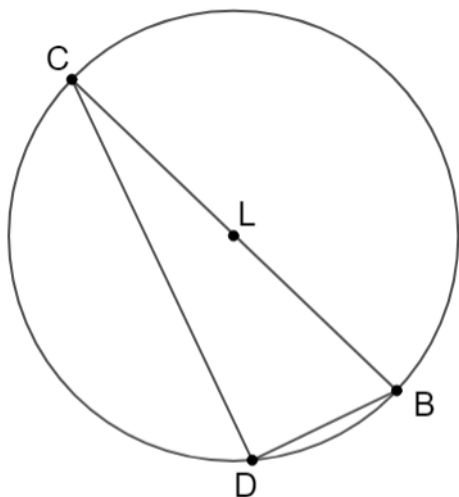

1. Find the value of x .
2. Find the $m\angle XYZ$.
3. Find the $m\widehat{YZ}$.
4. Find $m\angle YZX$.

Circle D is shown, where points P, T , and W are on Circle D and create $\triangle PTW$. $m\angle PTW = 24^\circ$ and $m\angle TWP = 140^\circ$.

5. Find $m\widehat{PT}$.
6. Find $m\widehat{TW}$.

Circle L has points B, C , and D on Circle L and diameter $\overline{BC}$. $\triangle BCD$ is inscribed in the circle. $m\widehat{CD} = 160^\circ$, $m\angle DCB = 10^\circ$, and $m\angle DBC = (2x + 20)^\circ$.

7. What is the $m\angle CDB$?
8. What is the value of x ?
9. Determine $m\angle DBC$.
10. Determine $m\widehat{DBC}$.
