

Geometry: Unit 11, Lesson 6

1. Is the inequality $12.5 + 17.3 > 29$ true?

2. Line segments DE and FH are shown. Point G lies on $\overline{FH}$. $DE = 8$, $FG = 4$, and $GH = 7$. What is equal to $FG + GH$?

3. The values 17.2 and 31.8 are used in the three inequalities shown. What value is a solution to all three inequalities?

$$31.8 + x > 17.2$$

$$31.8 + 17.2 > x$$

$$17.2 + x > 31.8$$
