

Geometry
Unit 11
Lesson 9 Practice

Name _____
Date _____
Period _____

Use this information to answer questions 1 through 5.

Triangle ABC is shown, where $\overline{DE}$ is the midsegment. $AC = 6x + 16$, $DE = 5x - 4$, $AB = 34$, and $BE = 23.8$

1. Find the value of x .
2. Identify the length of $\overline{DE}$.
3. Identify the length of $\overline{AC}$.
4. Identify the length of $\overline{AD}$.
5. Calculate the perimeter of triangle BDE .

Use this information to answer questions 6 through 10.

Triangle XTL is shown, where $\angle XLD$ and $\angle LTA$ are exterior angles. $m\angle LXT = m\angle LTX = (7x)^\circ$ and $m\angle XLT = (16x)^\circ$

6. Find the value of x .

7. Find $m\angle XLT$.

8. Find $m\angle LTX$.

9. Find $m\angle DLX$.

10. Find $m\angle LTA$.
