

Geometry: Unit 11, Lesson 9

1. Parallel line segments $\overline{MB}$ and $\overline{CW}$ are shown, with transversals $\overline{GH}$ and $\overline{ZX}$ creating $\triangle PKL$. What is the value of $m\angle PLK + m\angle LKP + m\angle KPL$?

2. Triangle MPV is shown, where point R is the centroid of the triangle. Is the statement $\frac{VW}{VP} = \frac{1}{2}$ true?

3. Triangle RNT is shown, where point K is the midpoint of $\overline{RN}$, and point V is the midpoint of $\overline{NT}$. Is the statement $\angle NKV \cong \angle NRT$ true or false?
