

Geometry: Unit 12, Lesson 7

1. Line segment TR is shown on the coordinate plane. Point T is located at $(-15, -25)$ and point R is located at $(-15, 15)$. What is the length of $\overline{TR}$?

2. Right triangle WHS is shown, where $\overline{HS} \perp \overline{WS}$, $HS = 3$, $WH = 10$, and $WS = x$. Write an equation that can be used to solve for x .

3. Line segment BT is shown on the coordinate plane. Point B is located at $(-8, 4)$ and point T is located at $(4, 4)$. What is the length of $\overline{BT}$?
