

Geometry: Unit 12, Lesson 8

1. A partial expression is shown $x^2 - 4x + \underline{\hspace{2cm}}$. What value is needed to complete the square for the expression to become a perfect square trinomial?
2. A partial expression is shown $x^2 - 20x + \underline{\hspace{2cm}}$. What value is needed to complete the square for the expression to become a perfect square trinomial?
3. Rewrite the expression $(x + 11)^2$ in expanded form.
