

Use the following information for questions 1-4. The equation of Circle C is $(x - 9)^2 + (y + 2)^2 = 8$.

1. Complete the table by substituting the given coordinates for x and y in the equation of Circle C . Then, determine the value of the left side of the equation to complete the simplified equation in the last column.

Coordinate	Substitution	Simplified Equation
$F(7,0)$		_____ = 8
$R(7,-4)$		_____ = 8
$T(11,0)$		_____ = 8

2. Graph Circle C , $(x - 9)^2 + (y + 2)^2 = 8$.

3. Plot $F(7,0)$, $R(7,-4)$, $T(11,0)$ on the circle.
4. Determine the length of the diameter of Circle C .

Use the following information for questions 5-7. Circle P has a center located at $T(3,4)$ and point $L(4,9)$ on the circle.

5. Determine two points that are the endpoints of a diameter of Circle P .
6. What is the length of the radius?
7. Write the equation for Circle P .

The equation of Circle W is $(x - 3)^2 + (y + 5)^2 = 17$. Determine whether the following points lie inside, outside, or on Circle W .

Point	Work	Location
$C(3, -10)$		☐ Inside Circle W ☐ Outside Circle W ☐ On Circle W
$N(2,3)$		☐ Inside Circle W ☐ Outside Circle W ☐ On Circle W
$T(4, -1)$		☐ Inside Circle W ☐ Outside Circle W ☐ On Circle W

8. The equation of Circle R is $(x + 3)^2 + (y + 6)^2 = 10$.

Select all points that are outside Circle R .

- ☐ $(-3, -6)$
- ☐ $(-3, -2)$
- ☐ $(0, -5)$
- ☐ $(0, 0)$
- ☐ $(-1, -6)$

9. Circle M and Circle T intersect at point H .

Equation of Circle M is $x^2 + (y - 2)^2 = 1$

Equation of Circle T is $(x + 3)^2 + (y - 1)^2 = 9$

Which coordinate pair is the location of point H ?

- ☐ $(-3, 4)$
- ☐ $(4, 0)$
- ☐ $(0, 3)$
- ☐ $(0, 1)$
