

Geometry: Unit 13, Lesson 4

1. Line segment DK is shown, where point R lies on the segment. The ratio of DR to RK is $7 : 2$. If $RK = 28$, what is the value of DK ?

2. Line segment WR is shown, where point T lies on the segment. The ratio of WT to TR is $2 : 7$. What is the ratio of WR to TR ?

3. Line segment DS is shown, where point W lies on the segment. The ratio of DW to DS is $\frac{2}{13}$. $DS = 260$. What is the length of $\overline{SW}$?
