

1. Find the length of segment CD using the Pythagorean Theorem. If necessary, round to the nearest thousandth.

$CD =$ _____

Use the following information for questions 2-6.

$\triangle ABC$ has vertices at $A(9,6)$, $B(1,6)$, and $C(5,-3)$.

2. Graph $\triangle ABC$ on the coordinate plane.

Find the length of each segment. If necessary, round to the nearest tenth.

	Line Segment	Length of Line Segment
3.	$\overline{AB}$	
4.	$\overline{BC}$	
5.	$\overline{AC}$	

6. Complete the statement.

$\triangle ABC$ is classified as a(n)

- ☐ equilateral
- ☐ isosceles
- ☐ scalene

triangle because $\triangle ABC$ has

- ☐ no
- ☐ two
- ☐ three

equal side lengths.

Use the following information for questions 7-10.

$\triangle TUV$ has vertices at $T(1, -8)$, $U(8, -1)$, $V(4, -1)$.

Find the length of each segment. If necessary, round to the nearest tenth.

	Line Segment	Length of Line Segment
7.	$\overline{TU}$	
8.	$\overline{UV}$	
9.	$\overline{TV}$	

10. Complete the statement.

$\triangle TUV$ is classified as a(n)

- ☐ equilateral
- ☐ isosceles
- ☐ scalene

triangle because $\triangle TUV$ has

- ☐ no
- ☐ two
- ☐ three

equal side lengths.
