

1. Find the length of $\overline{KM}$ using the Pythagorean Theorem. If necessary, round to the nearest thousandth.

Use the following information for questions 2-4. $\triangle BCD$ has vertices at $B(-1,4)$, $C(-6,1)$, and $D(-3,9)$.

2. Graph $\triangle BCD$ on the coordinate plane.

3. Find the length of each segment. If necessary, round to the nearest tenth.

Line Segment	Length of Line Segment
$\overline{BC}$	
$\overline{CD}$	
$\overline{BD}$	

4. Complete the statement.

$\triangle BCD$ is classified as a(n) ☐ equilateral
☐ isosceles
☐ scalene triangle because $\triangle BCD$ has

☐ no
☐ two
☐ three equal side lengths.

Use the following information for questions 5-6. $\triangle FGH$ has vertices at $F(-2,0)$, $G(2,5)$, $H(7,1)$.

5. Find the length of each segment. If necessary, round to the nearest tenth.

Line Segment	Length of Line Segment
$\overline{FG}$	
$\overline{GH}$	
$\overline{FH}$	

6. Complete the statement.

$\triangle FGH$ is classified as a(n) ☐ equilateral
☐ isosceles
☐ scalene triangle because $\triangle FGH$ has

☐ no
☐ two
☐ three equal side lengths.
