Geometry: Unit 2, Lesson 1

1. If $m\angle ABC = 90°$ and $m\angle RST = 90°$, then $m\angle ABC = m\angle RST$ is an example of what property?

2. If it is given that $m\angle JKL = m\angle XYZ$ and $m\angle XYZ = m\angle QRS$, then concluding that $m\angle JKL = m\angle QRS$ is an example of what?

3. If $m\angle ABC = m\angle XYZ$ and $m\angle XYZ = 45°$, what is the value of the expression $m\angle ABC + 45°$?
