

6Ath Grade: Unit 3, Lesson 4

1. Identify the point values plotted on the number line.

$$H = -3.5$$

$$D = -1$$

$$F = 2$$

$$B = 4.5$$

2. Which of the values is greater: 4.75 or $\frac{19}{4}$? Explain.

Neither, the decimal form of $\frac{19}{4}$ is 4.75, which is the same value. They are equal.

3. Which of the values is closest to 4: $\frac{3}{3}$ or -7.37? Explain.

$\frac{3}{3}$ is closest to 4 because $\frac{3}{3}$ simplifies to become 1 which is 3 away from 4 on a number line, while -7.37 is 11.37 away from 4 on a number line.
